

# PRINCIPAL'S MESSAGE

***"No matter how educated, talented, rich or cool you believe you are, how you treat people ultimately tells all:***

Education is vital to the pace of the individual, social, and growth of the country and teaching methodologies have changed drastically over the years. Traditional teaching practice is when a teacher directs students to learn through memorization and recitation techniques which restrict the development of critical thinking, approach to problem-solving, and decision-making skills.

Whereas modern teaching techniques involve more interesting interactions, a student-based form of teaching, and group participation to develop skills. Modern education techniques focus on student interaction, encouragement, the boundaries of authority are being broken down, and focus on enjoyment with satisfactory grades.

The traditional approach in education has successfully been delivered through recitation and memorization of concepts and theories and effective teaching plays a crucial role in helping the children grow from one level to another in a more socialistic way to approach life. In education, effectiveness does not mean being right, perfect, or giving good service to society or family, but bringing the best in students. The traditional or conventional methods are the most common practice in schools and colleges. The old-fashioned way of teaching-learning is all about class period like students would sit silently in class and this practice takes one student after another as it turns to recite the lesson. Generally, the teacher observes each student reciting how they are learning and memorizing the lessons. At the end of the lesson, the teacher will go for the written or oral test to examine the student which is known as an assignment or study recitation test. This is common practice that we have in education, which allows us to know the way traditional methods were taught and it ensures that students are rewarded for their continuous efforts. Such practices were based on well-established customs that had been used successfully over many years in schools and colleges. The teachers communicated the knowledge and tried to enforce the standards of behaviors among the students.

Students are matched by age, and possibly also ability. Instructional materials are based on textbooks, lectures, and individual written assignments. All students in the classroom generally receive a single, unified curriculum. Subjects are often individual and independent instead of integrated and interdisciplinary, particularly in secondary school.

In modern teaching, the teacher teaches by using different pedagogy. Effective education is believed to be the most fundamental factor in prosperity and knowledge of students. Learning must be independent and self-directed in order to be effective. Amongst the core features of Modern Education, Online Education has become a quintessential part of the learning process.

The internet and technology have indeed made it possible for students to continue their education in any part of the world without any geographical constraints being imposed. Thus, online learning fits into the busy lives of students, thereby, making it easier for them to continue their further education. Modern education is aided with a variety of computer technologies, internet, projector presentations to make studies interesting and interactive for students. It encourages students to engage with the real world, analyze everything that happens in different life spheres.

Next-generation teaching techniques require a complete rethinking of how students and teachers interact in the classroom. This allows students to develop their higher order of thinking, creating, evaluating, and analyzing skills.

#### **Future with traditional and advanced techniques**

Traditional practice uses repetition and memorization of information to educate the children which restricts critical thinking, problem-solving ability, and decision-making skills. Meanwhile, the modern teaching approach encourages students to collaborate and interactive ways of learning and therefore be more productive. Both modern and traditional practices are effective and useful in today's life as it's all about balance.

After having a long lengthy debate, the conclusion is that the main motives of the education should be to build the overall character and to bring the all-round development of the students. There is no point in discussing which teaching method is better than the other? Instead we should concentrate on providing the best education system to the students as it's the students who will run the nation in future.

It is concluded that we can develop a better education system only if we will be able to combine both the traditional and modern teaching methods.

## **Mock Drill on Fire Safety.**

As part of school safety and security of students , AVIS Suraksha Club conducted Mock Drill on fire safety on 23 Feb 2022. Mr Chary demonstrated the usage of fire extinguishers to the students of Grade X in the school premises. Students actively participated in this drill. Program coordinated by Mr Srikanth Counselor and Mr Charan PET with support of Mr Sridhar A.O. and other AVIS Staff.

## Annual Day

The Annual Day is a crucial part of every school. It is a day that the students as well as the teachers look forward to. It is a significant day as the students are provided a platform to showcase their talent and skill set to their entire school and parent fraternity. It brings teamwork and coordination among the students. It's a day of very grand celebration of what the school stands for and its achievements.

Akshara Vaagdevi International School had the opportunity of the celebration of this auspicious occasion to mix fun and learning. Grades PP to II. topics picked for the event was from one of the 17 sustainable development goals. The sustainable development goals is a framework that was designed by the UN in 2015 to achieve a better and more sustainable future for all.

Grade II selected SDG goal 3 Good Health and Well Being , followed by the toddlers of PP1 class , Life Below water, the 14th goal of the 17 SDGs. Grade II students put up a stupendous show where they focussed on the aspects of good health mentally and physically. Through skit and dance, the tiny tots showed and explored all the creatures living under the ocean. They depicted animals and described them precisely. Then the skit shows how a tortoise is stuck inside a cover due to the pollution caused by the humans in the ocean. One material that is extremely potent to the ocean is plastic. The message conveyed was to not pollute the water and save water animals from extinction. The PP2 grade selected the 15th goal of the SDGs, that is, life on land. Land pollution is the cause of many different factors that ultimately pollute the land. These factors include solid waste like plastic, deforestation, chemicals, etc. It has a detrimental impact on animal and human health. The kids of PP2 used their creative methods to explain this problem and its impact on the planet earth.
